

# MOBILE DESIGN PROJECTS

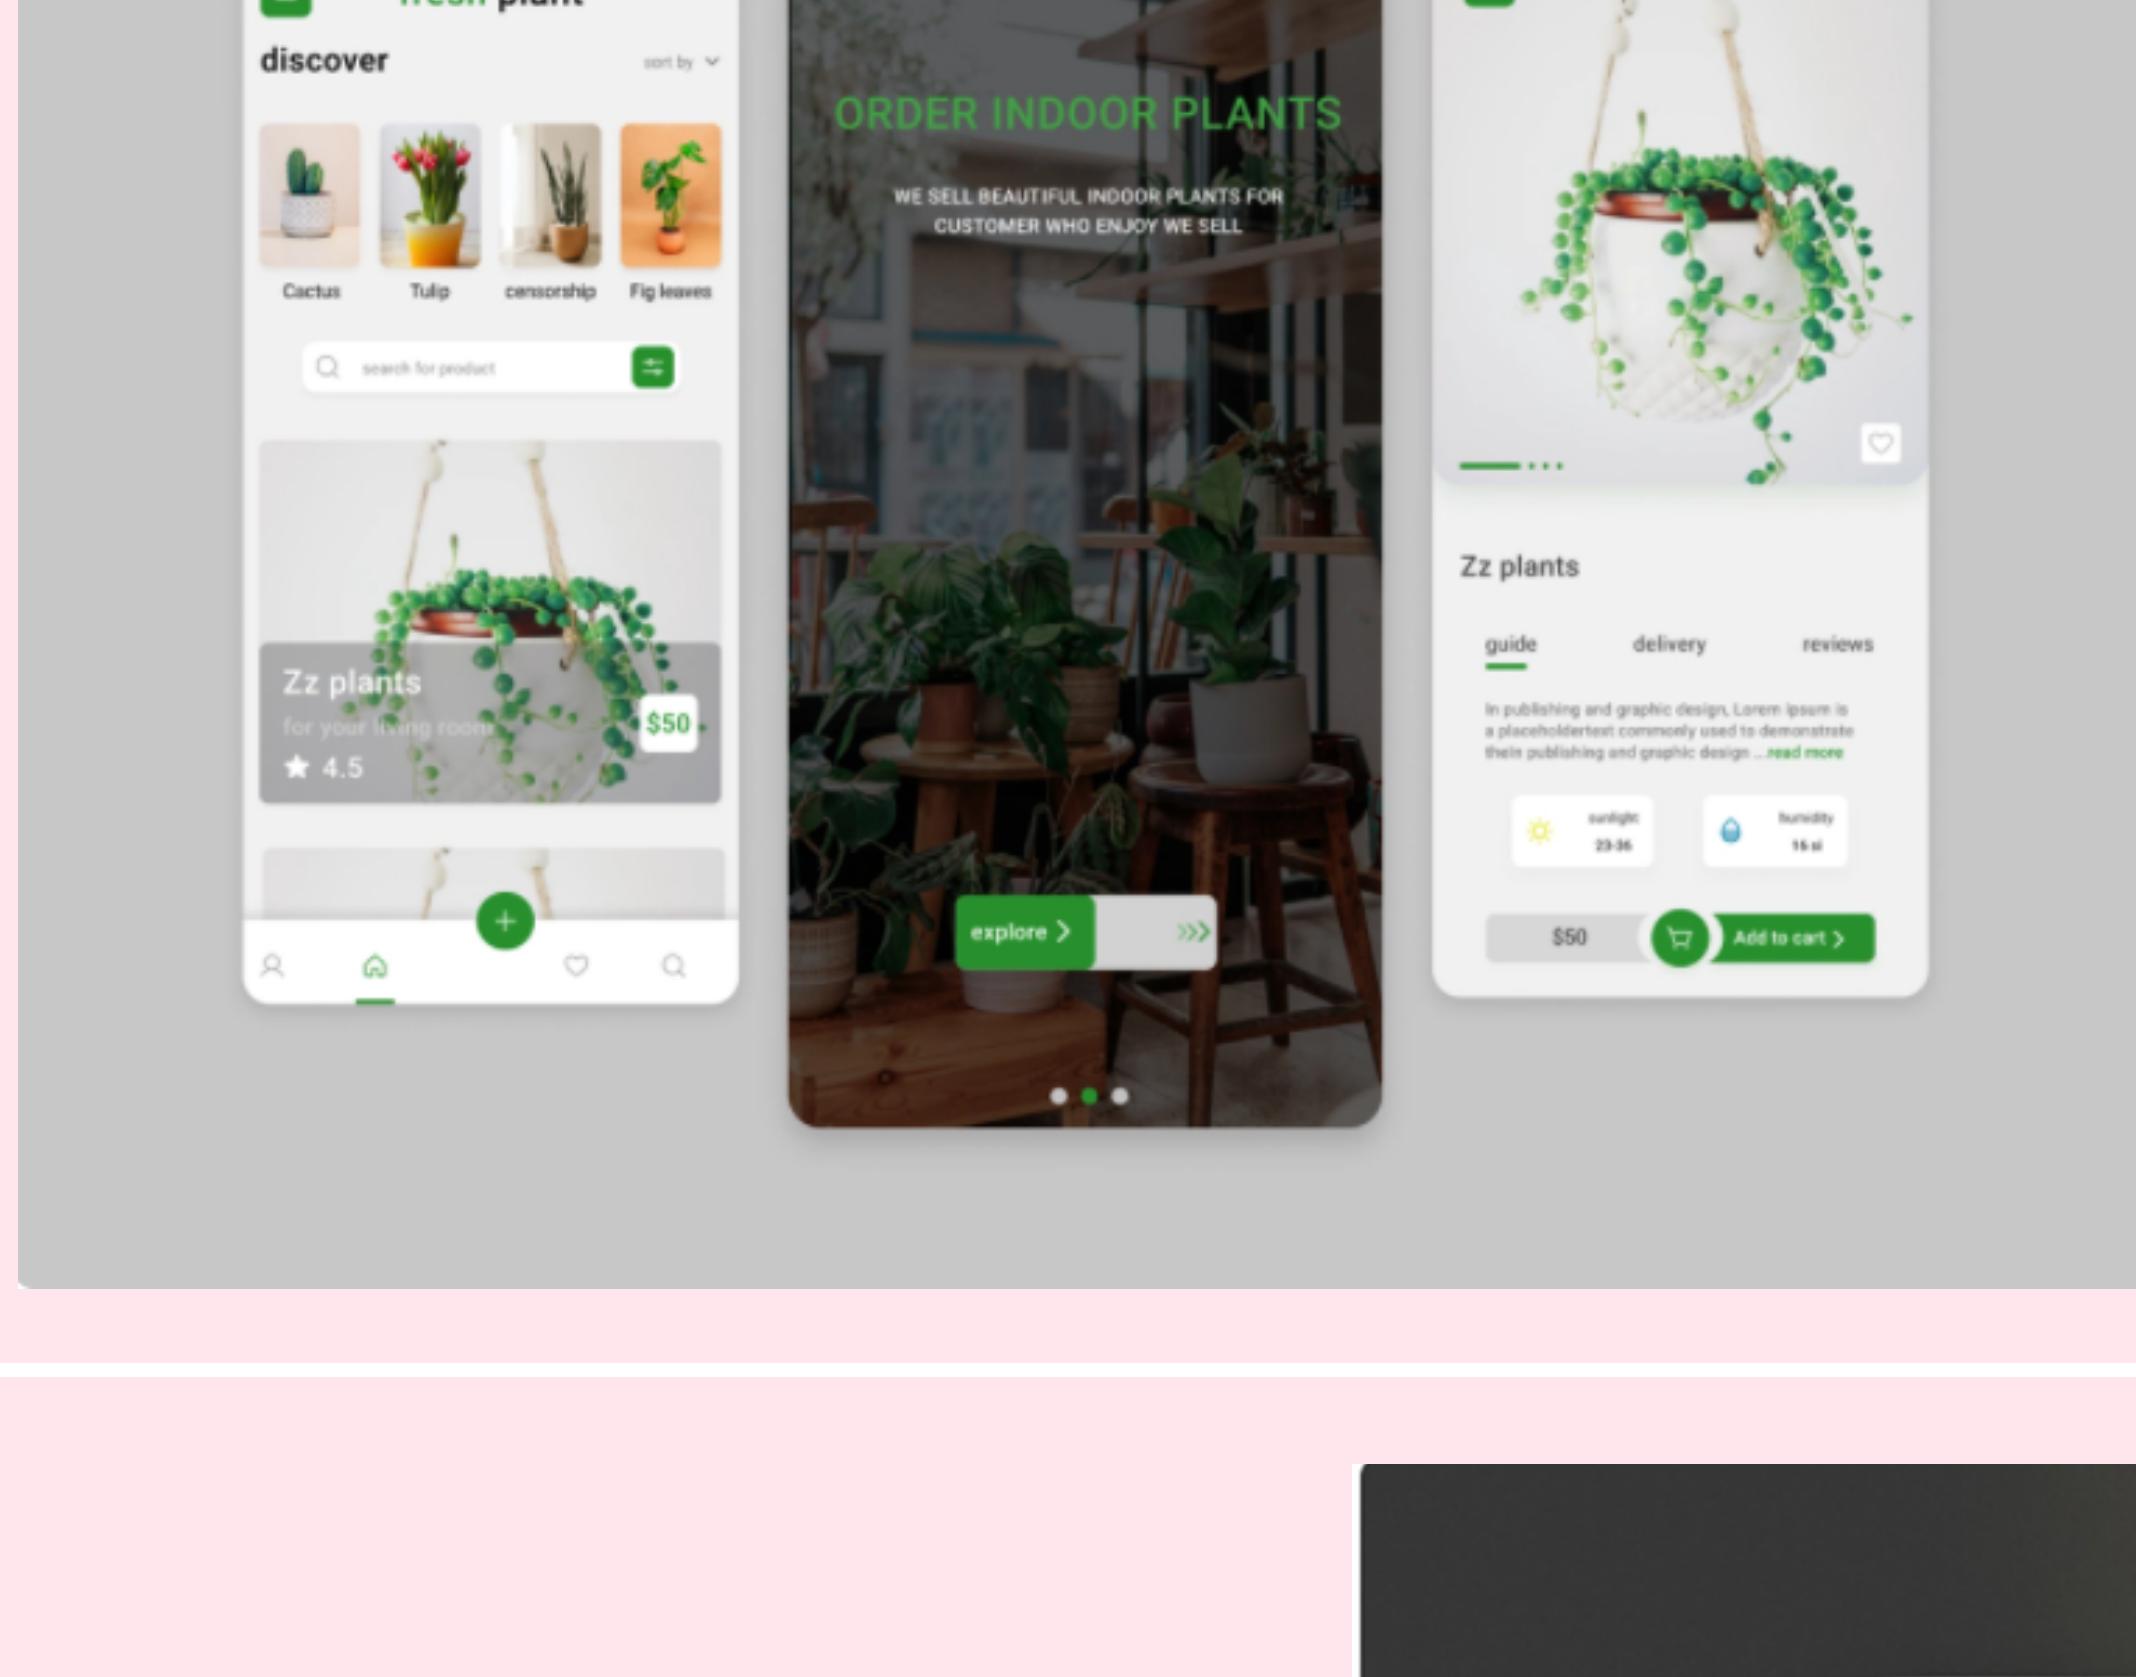

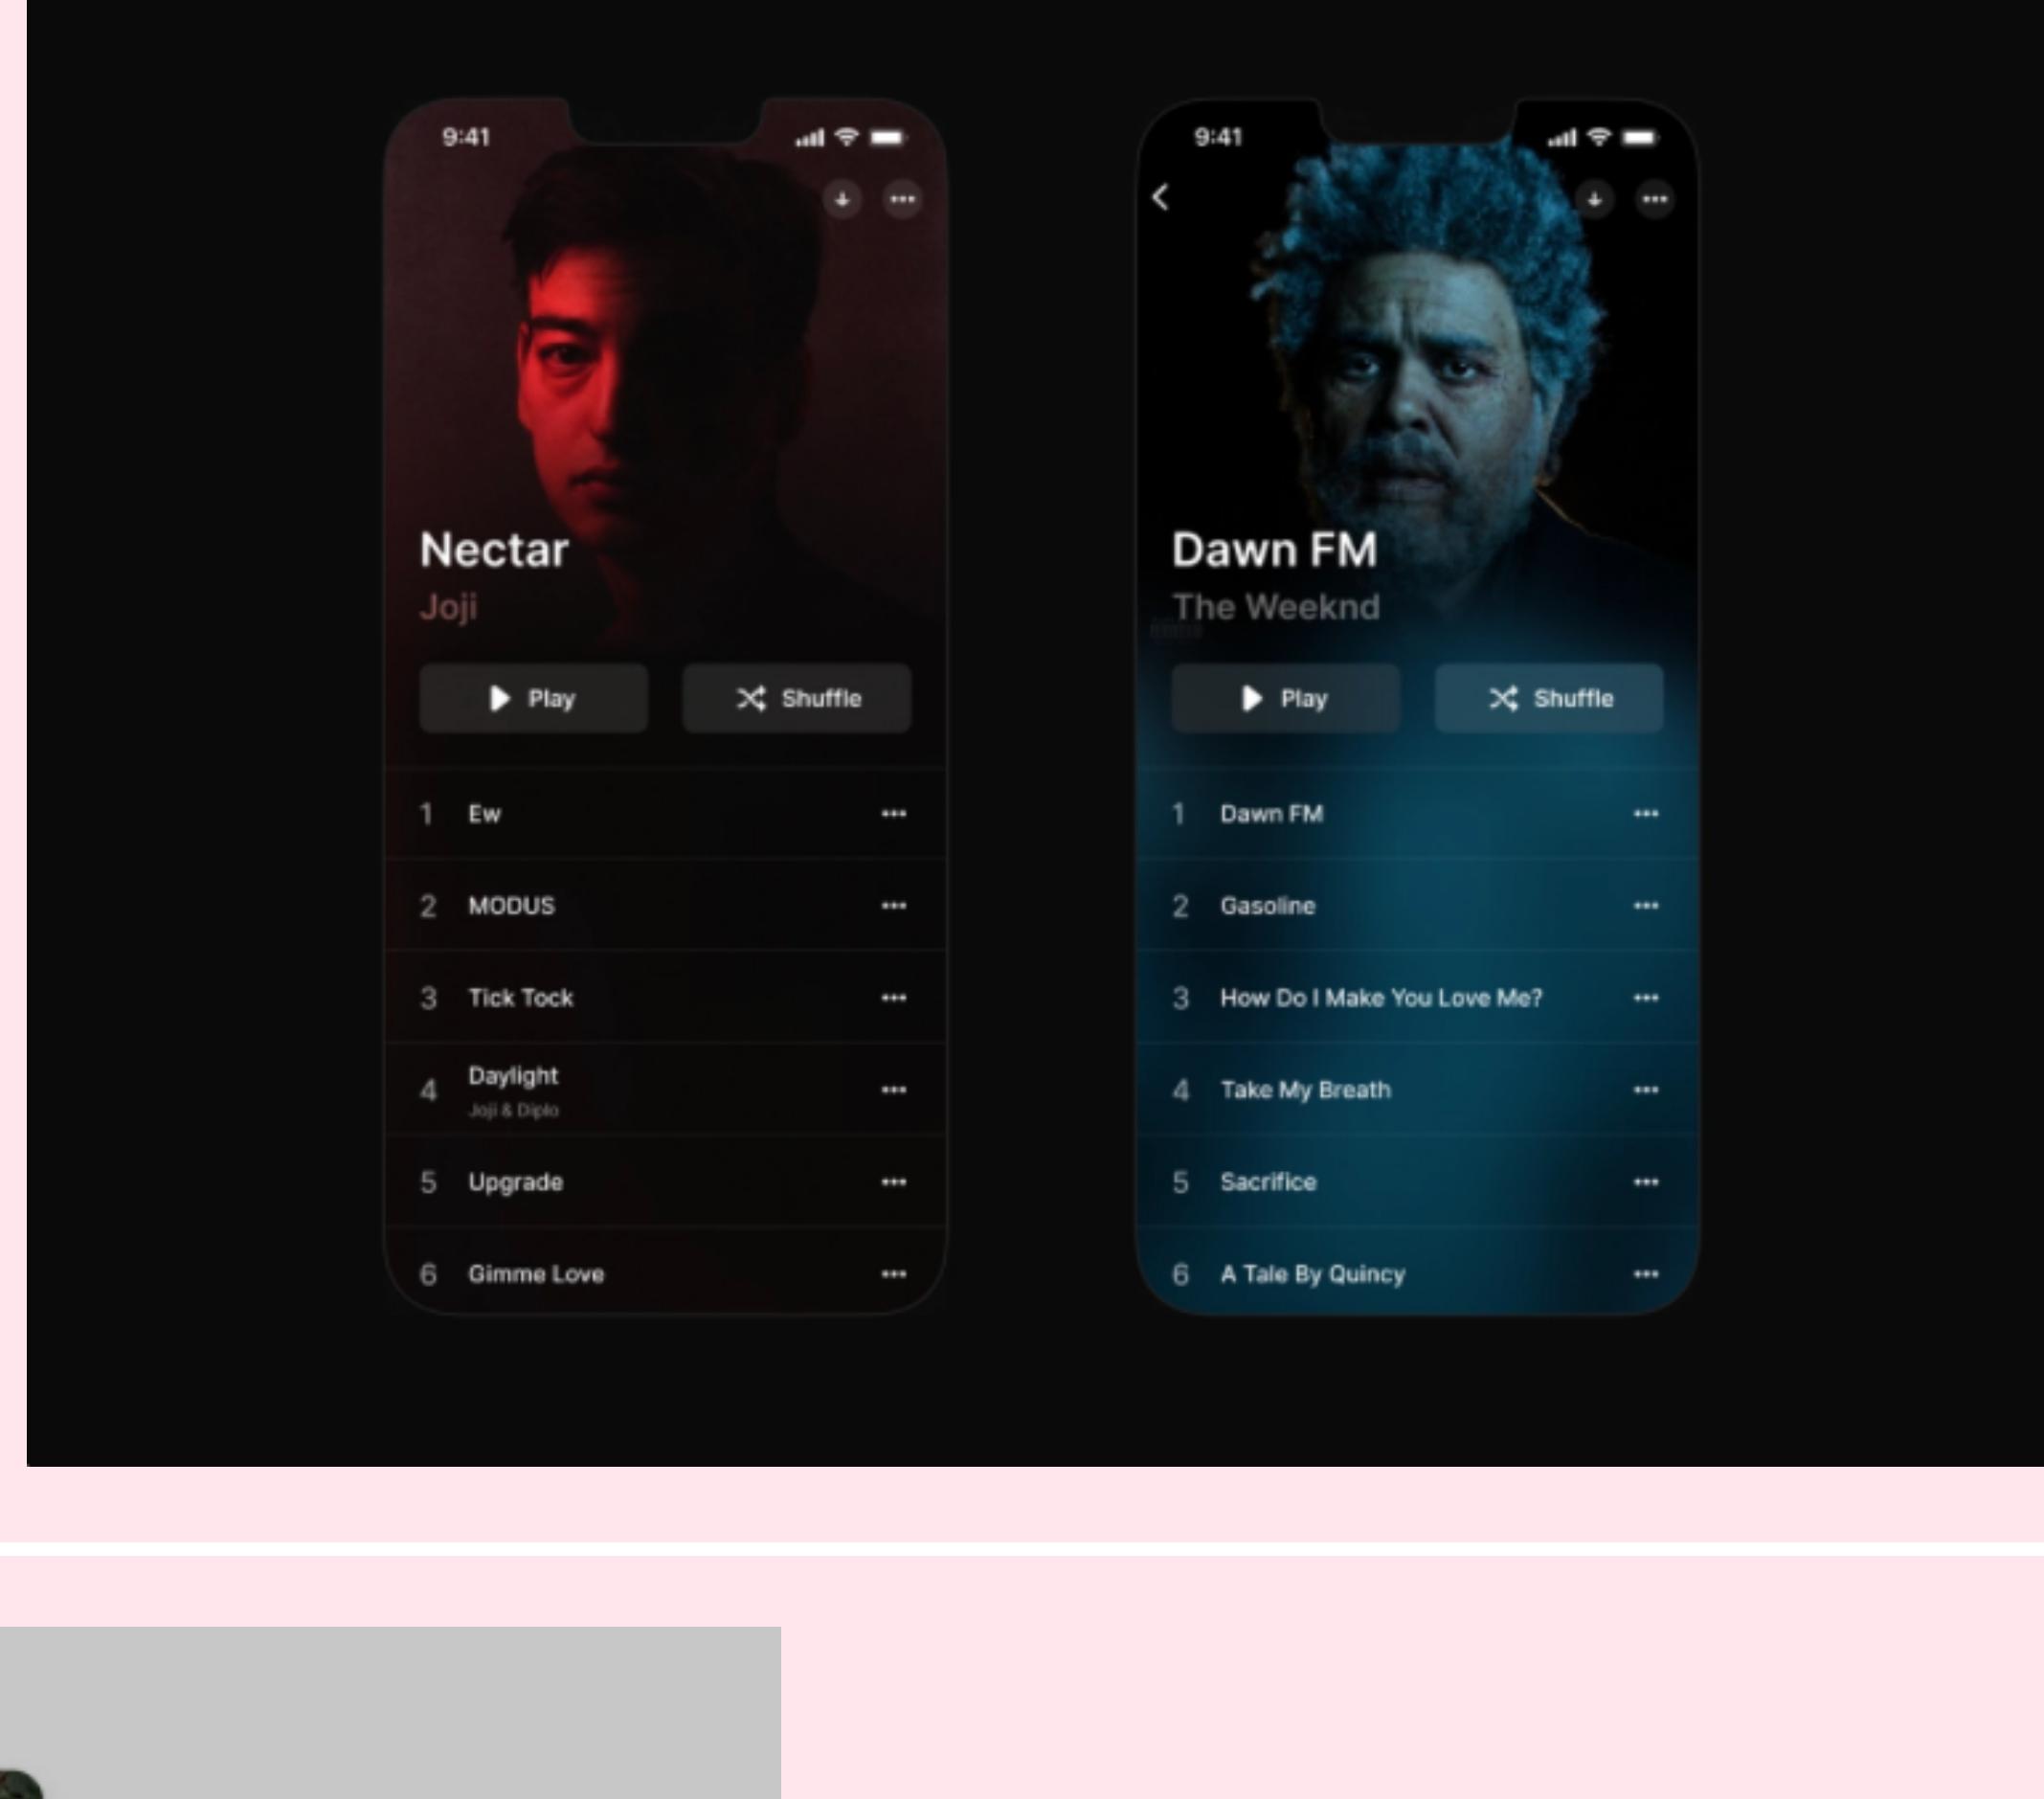

And a brief note on my thought process as to why I came up with the design:

One of my top ten favorite things to do is listen to music. After the end of a long day, all I really like to do is make myself some hot cocoa and plug in my earbuds to listen to a curated playlist.

I'm a huge fan of albums but I haven't found an interface I enjoy yet. I listen to music on both Apple Music and Spotify and neither have an aesthetically pleasing album interface - in my opinion.

They stick to the same old system interface - either light or dark mode. It's never something that truly shows the beauty of the album.

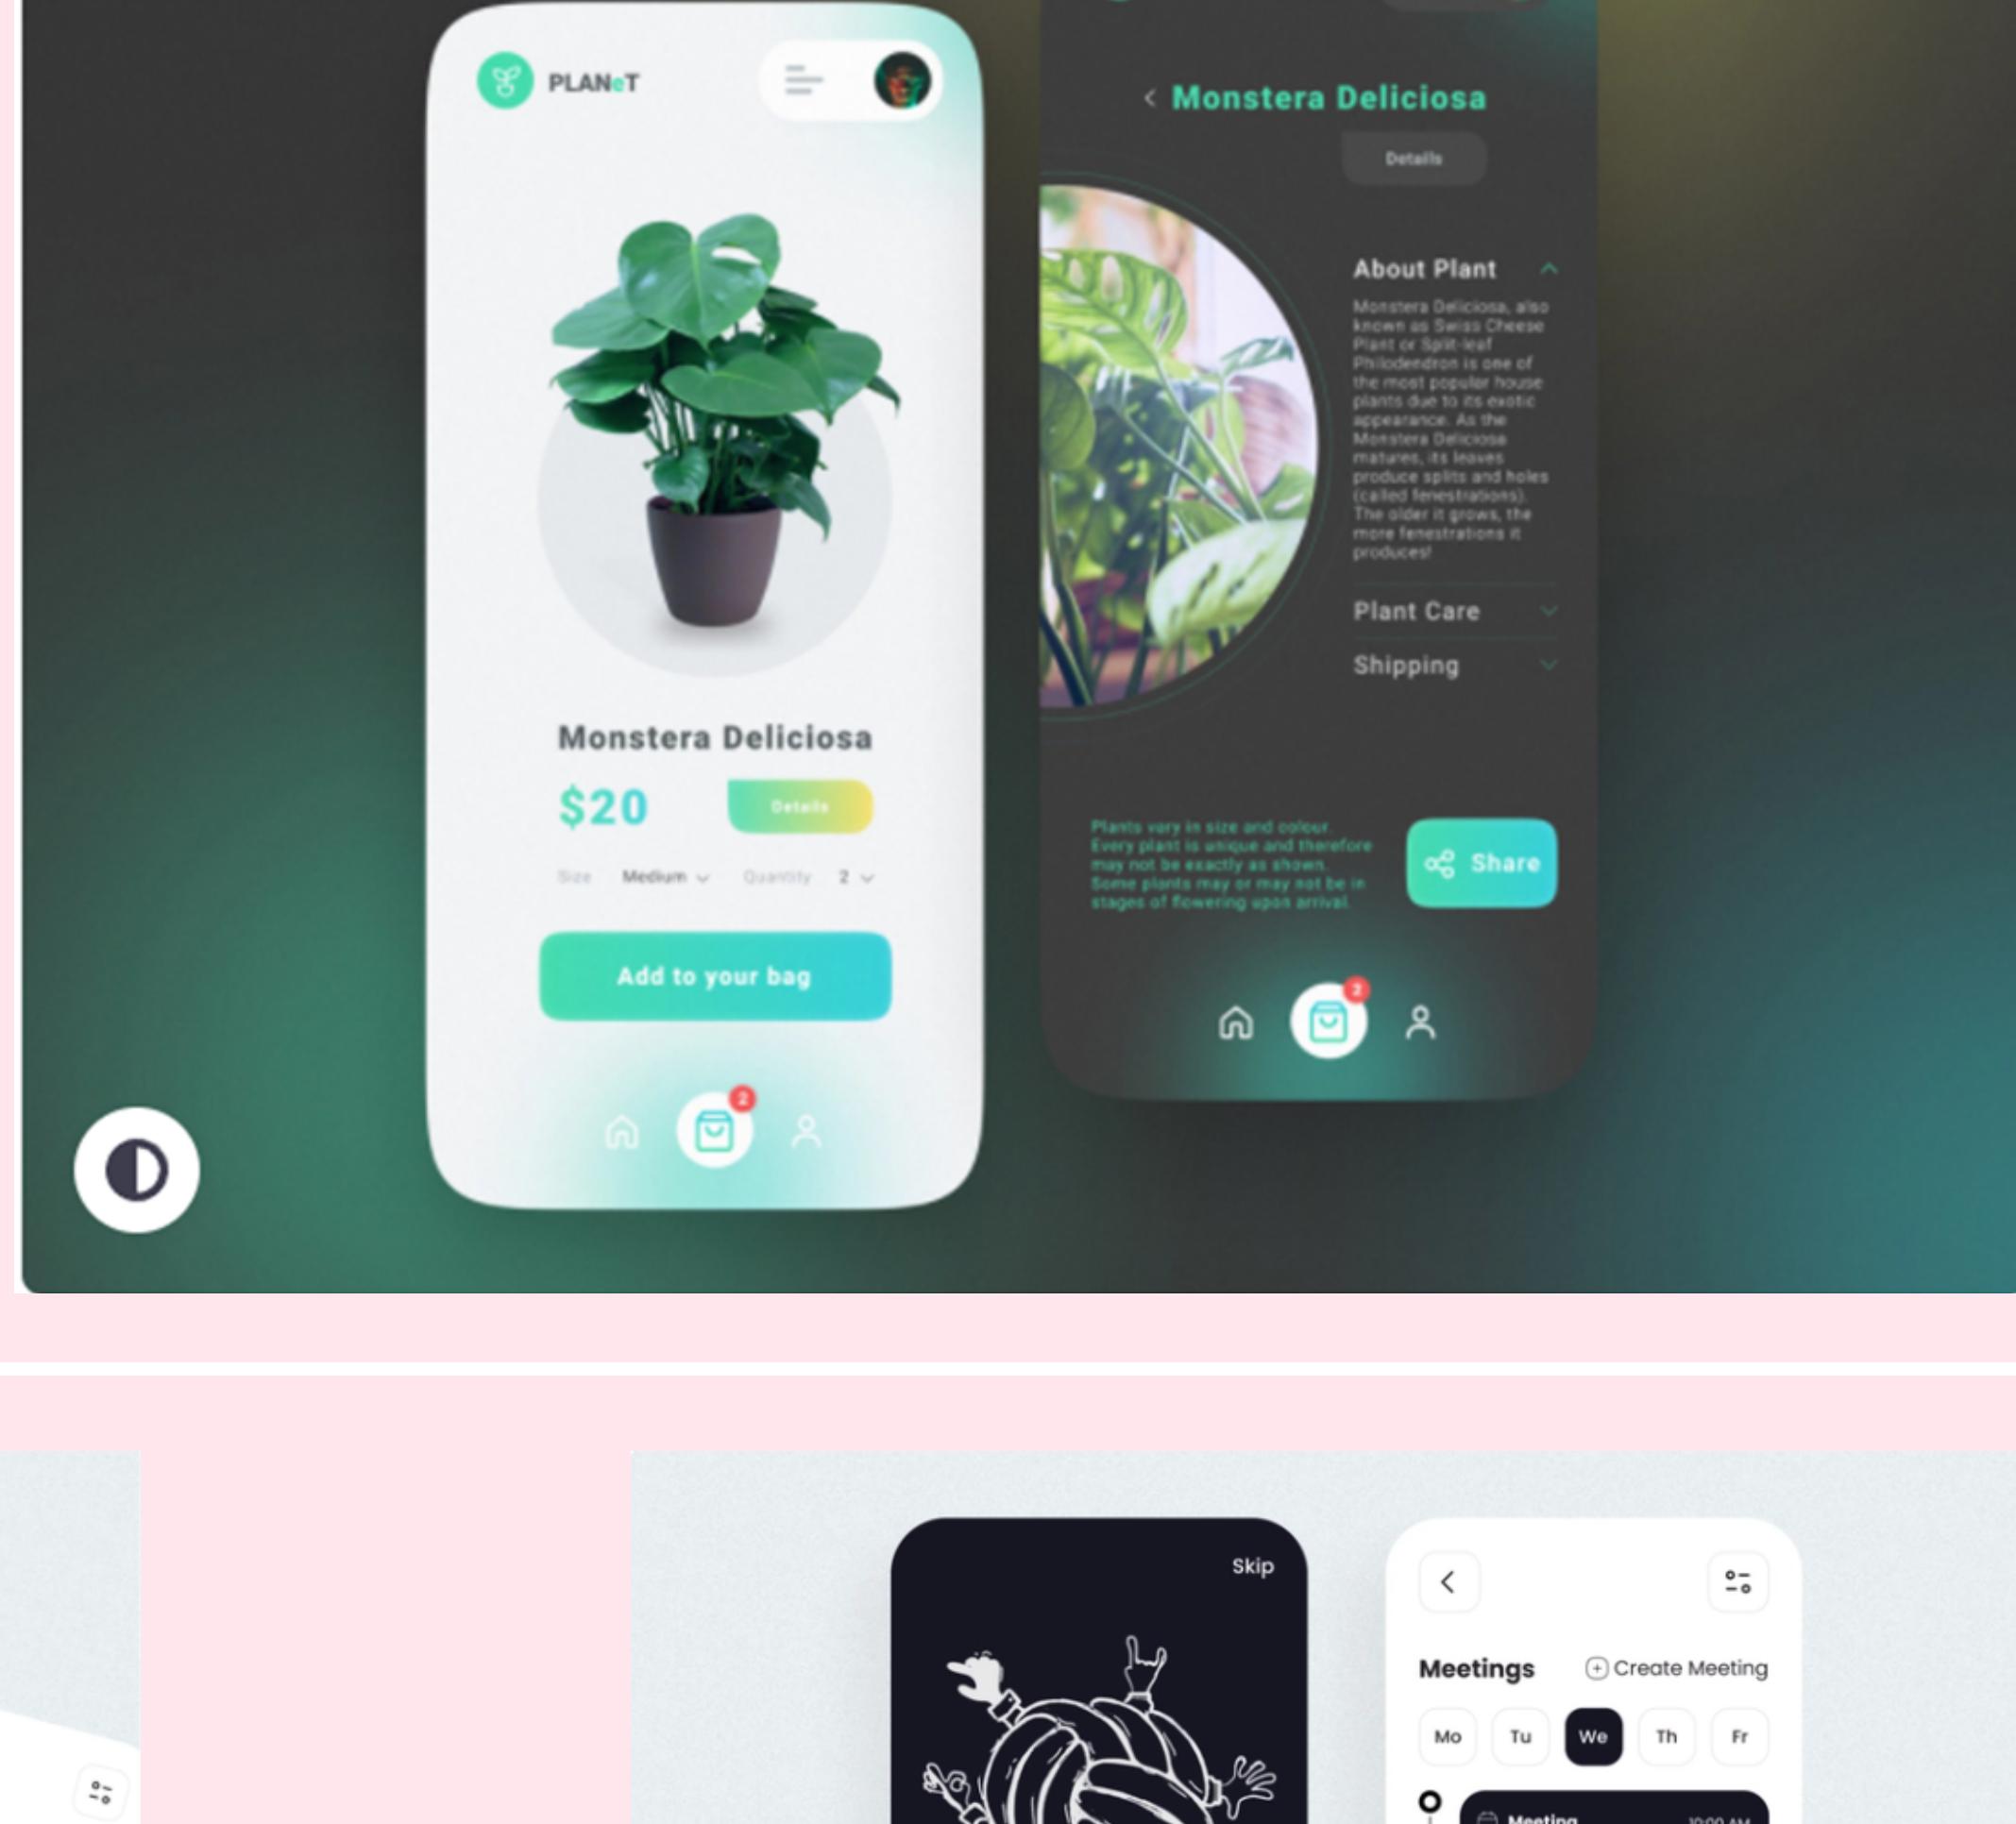

This is my idea of a playing album interface that takes the heart and soul out of the album covers and makes sure you feel the vibe all play long.

If you're anything like me, an aesthetic space means plants. Small plants, big plants, spiky plants, long leaf plants - all plants are good plants!

Recently, I've been trying to decorate a guest room in my mom's house. She's a plant lover - just like me. It's been hard trying to find succulents that fit both the overall vibe of the room as well as her home.

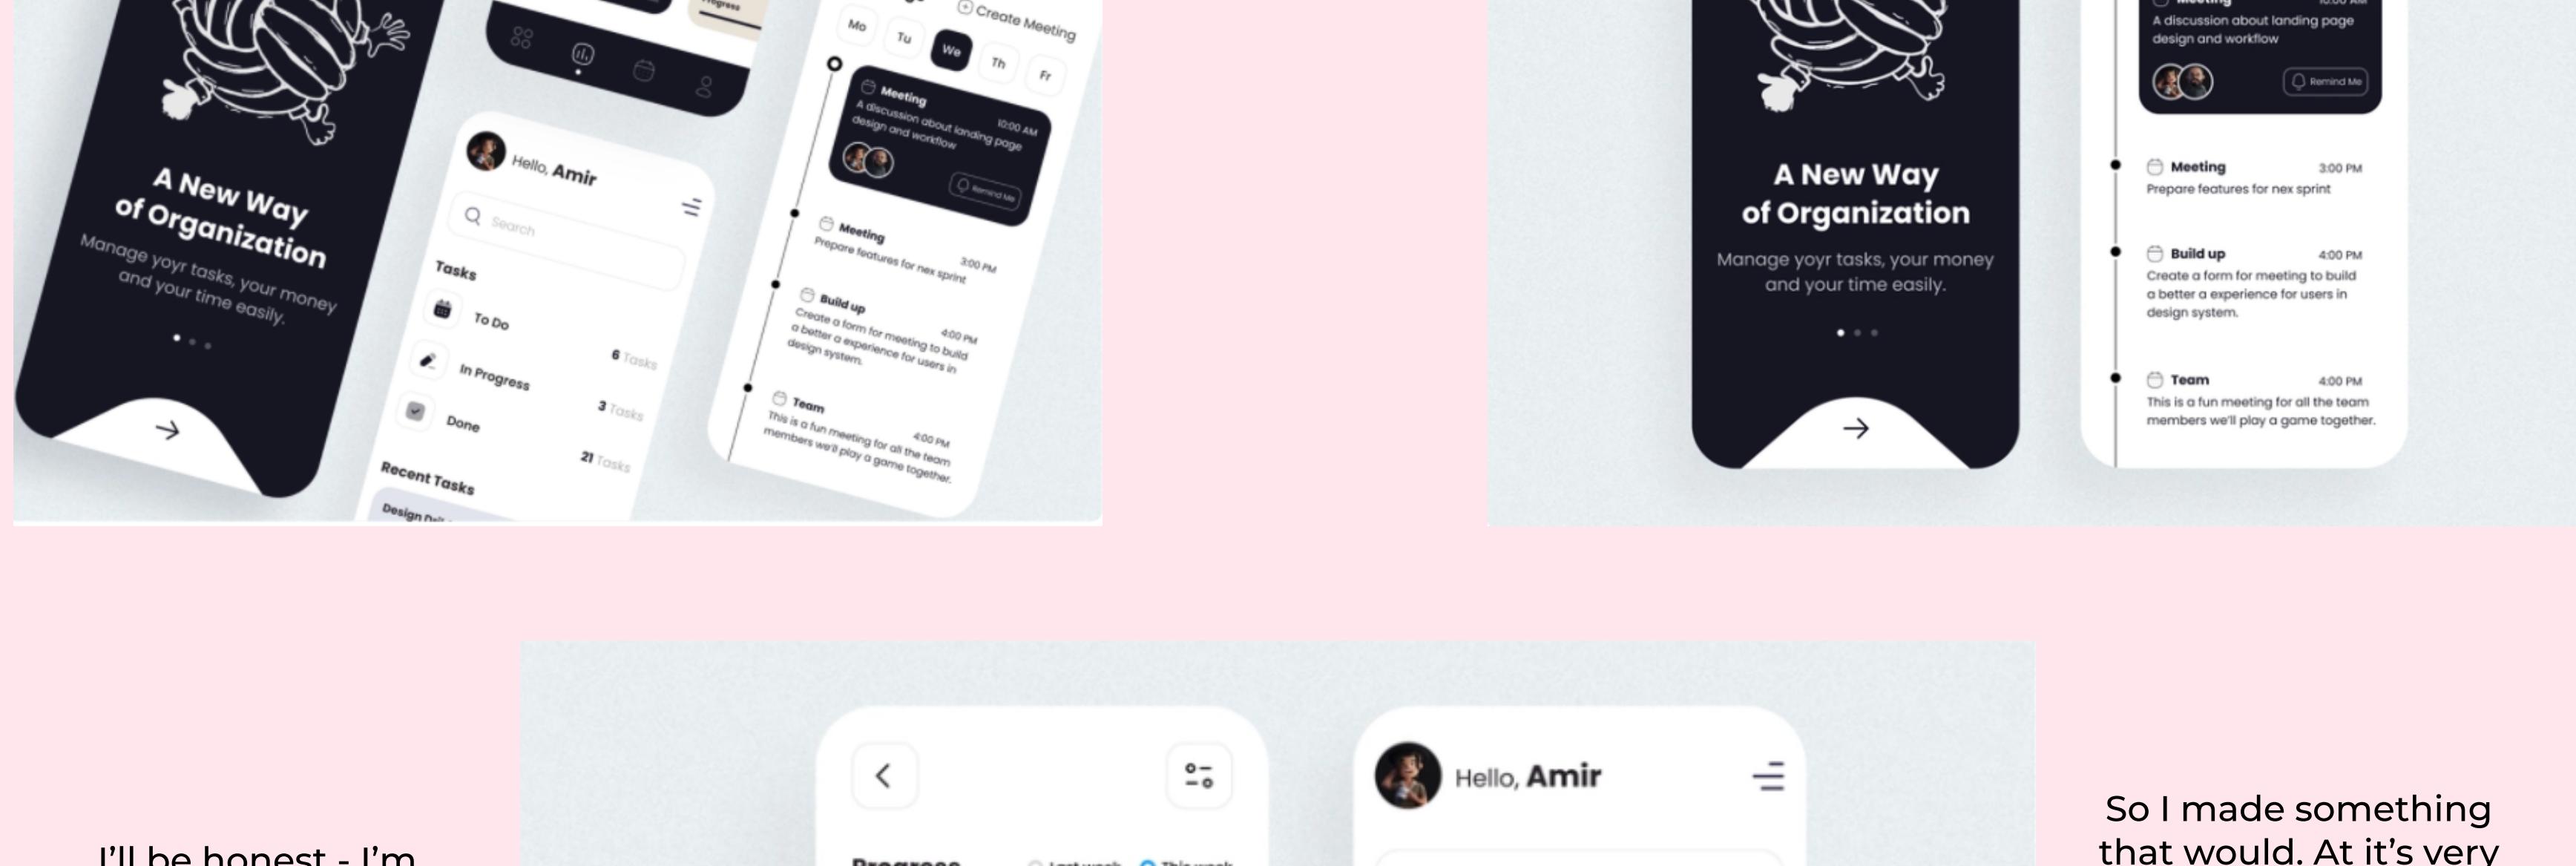

This app design was borne out of my need for not needing to spend hours upon hours shopping for plants and still have the same sort of quality I required. It would enable me to find what I needed with a quick search, order my succulents and spend my time doing something else - like designing another app!

If you've travelled to any foreign country and gone sightseeing, you know what their number one rule is - never, ever, ever touch something you don't know.

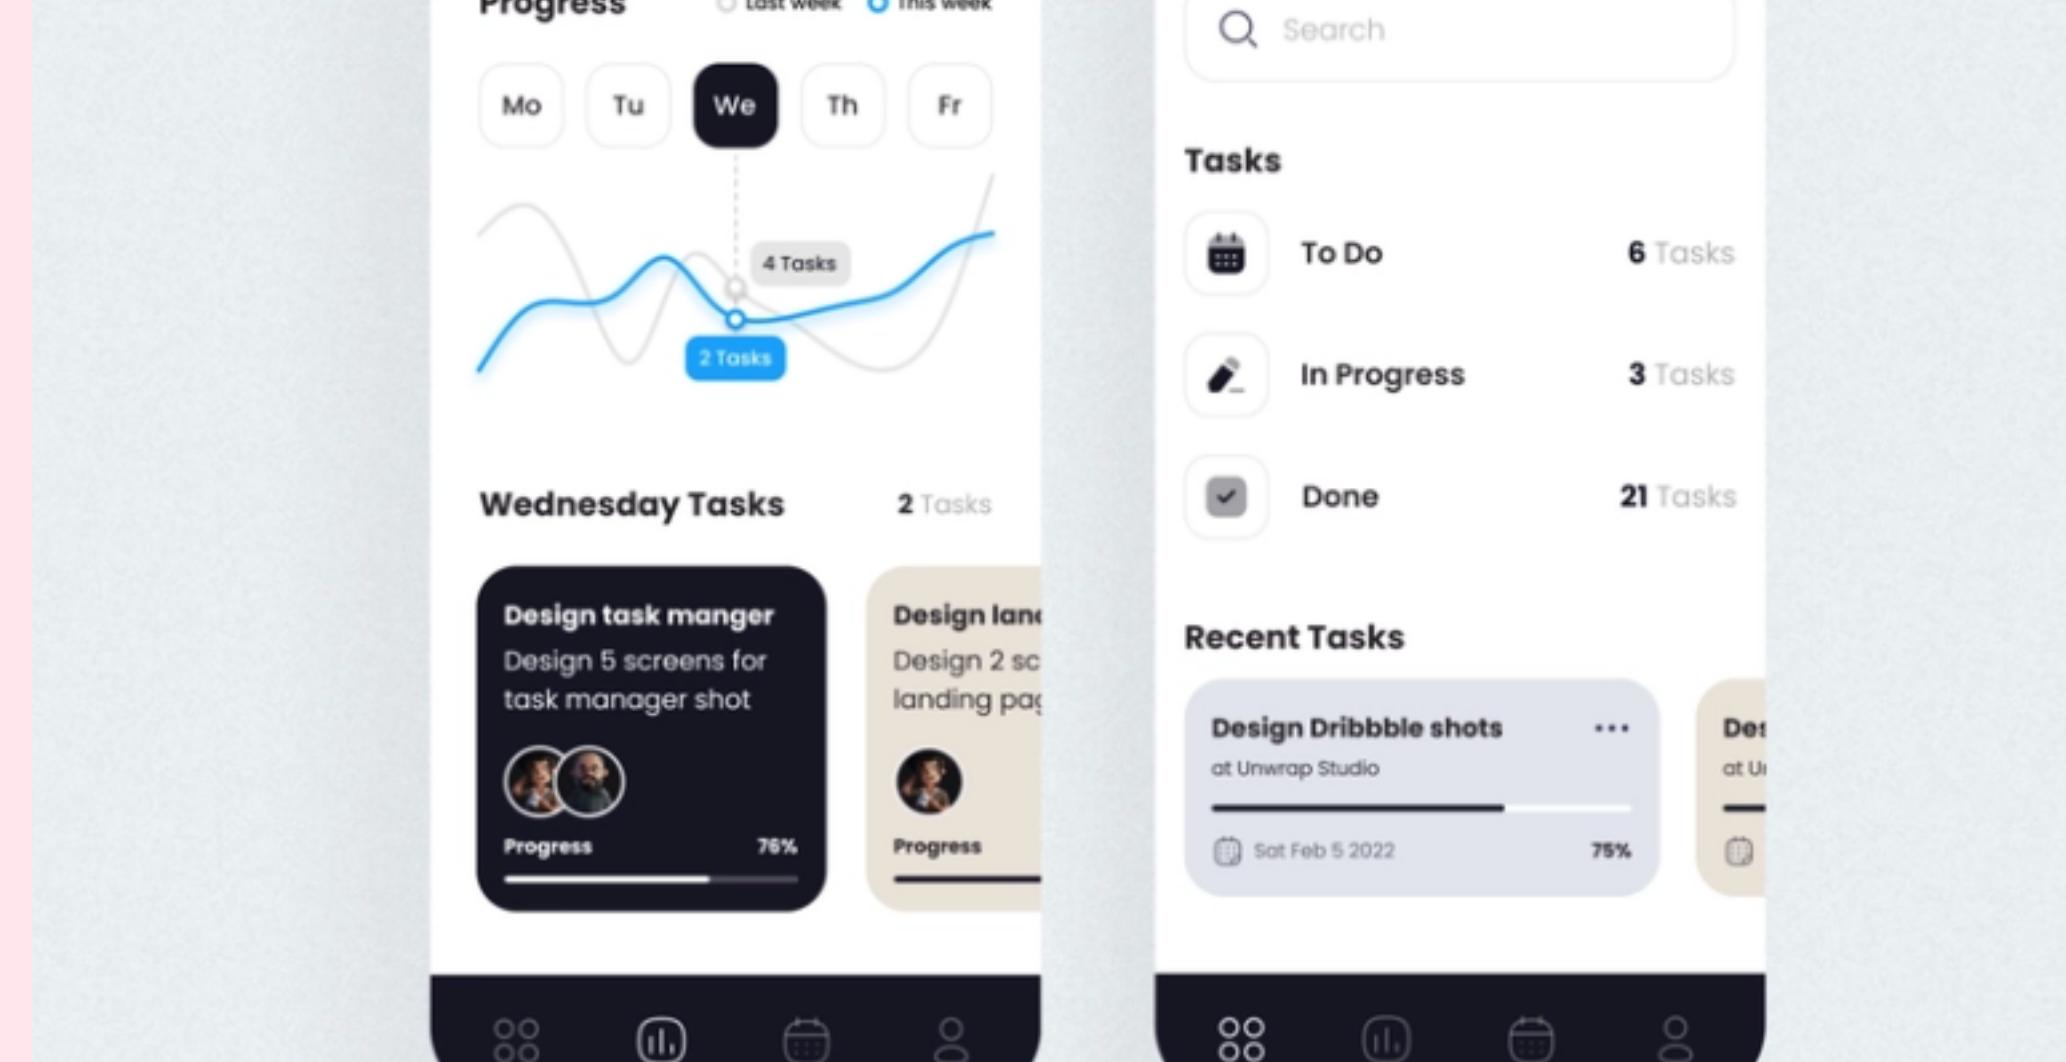

I came up with this app design when I was hiking and our tour guide told us to avoid these little plants along the hiking trail. It got me to thinking - shouldn't there be some sort of traveller's guide to dangerous plants in locations they've never been to?

This app helps with that. It's a simple concept that I hope to expand on soon.

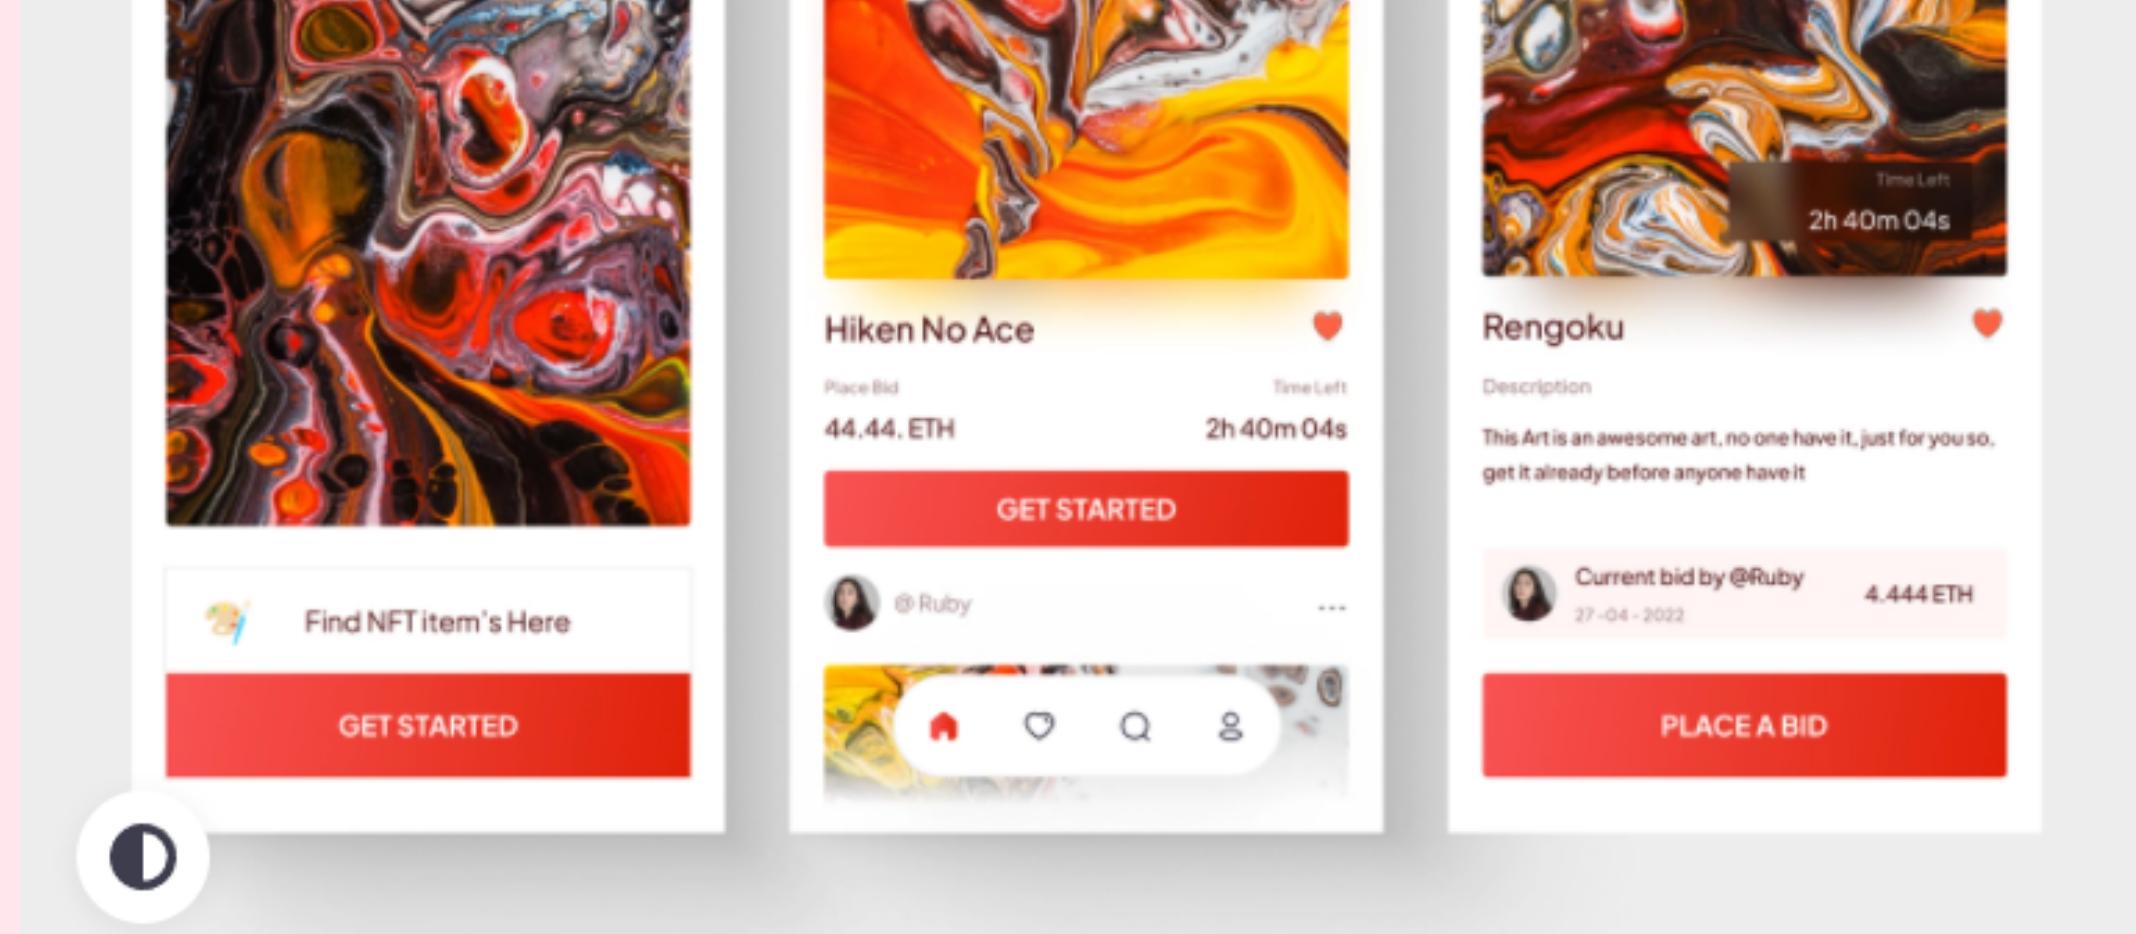

I'll be honest - I'm brilliant at procrastination. I always find an excuse - any excuse - to avoid doing something that I know I should be doing.

The usual task reminder apps didn't give me any urge to get up off my ass and do something actually productive.

So I made something that would. At it's very base, this app is like a game.

And each milestone completed is like heading to the next level. This is one of the apps I've taken to completion and done the whole shebang - wireframing, user testing, feedback from revisions, more user testing, complete concept. It even has its own prototype and I hope to one day make it a downloadable solution.

It's an NFT purchase app. Need I say more? I created this concept for a freelance project I had and my customer loved it!

I like it a lot too and I'm very grateful they let me use it for my own purposes.
